SPECIAL NOTICE

This statistical report presents tables showing current and historical data on U.S. foreign trade in agricultural products. Commodity and country information is for the most recent 2-year period. Statistics for calendar year 1994 are preliminary.

U.S. foreign agricultural trade statistics in this report were derived from official data released by the Bureau of the Census. Agricultural commodities are defined as (1) nonmarine food products and (2) other products of agriculture, including fibers, raw hides and skins, fats and oils, and beer and wine, which have not passed through complex processes of manufacture. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and in-transit through the United States from one foreign country to another when documented as such by the U.S. Customs Service.

Trade statistics for selected nonagricultural products, including fertilizer, fish, agricultural chemicals, farm machinery, and manufactured tobacco, are presented at the end of the commodity group tables.

Exports

Export data include "exports of domestic merchandise," defined as commodities grown, produced, or manufactured in the United States, and commodities of foreign origin that have been changed from the form in which they were imported. The export value is generally equivalent to a free-alongside-ship (f.a.s.) value at the U.S. port of export, based on the transaction price and including inland transportation, insurance, and other costs. Agricultural exports have been adjusted for transshipments through Canada based on information provided by the Federal Grain Inspection Service. More than 500 revisions have been incorporated into the 1993 tables.

Imports

Import data are "imports for consumption," which include entries for immediate consumption and withdrawals from bonded Customs warehouses. The import value is defined as the "Customs value," based on the foreign market value, export value, or constructed value, and excludes import duties, freight, insurance, and other charges incurred in moving the commodity to the U.S. port.

SUMMARY OF REPORT AER-716

The 1995 Farm Bill

GATT and Budget Constraints Are Crucial Issues for Export Programs

June 1995

Contact: Karen Z. Ackerman, (202) 720-6829

Export programs assisted about 20 percent of U.S. agricultural exports in 1989-93—and their role for certain commodities was much higher. A central policy issue related to these programs is how best to support farm exports, and thereby farm income, in a time of lower price subsidies under the Uruguay Round Agreement of the General Agreement on Tariffs and Trade (GATT) and with the current U.S. budget restraints. These and other policy questions and options are described in ***Agricultural Export Programs: Background for 1995 Farm Legislation***, a new report from USDA's Economic Research Service.

Exports play an important role in the health of the U.S. farm sector and related activities. For example, more than half the U.S. wheat crop is shipped overseas, as well as nearly half the rice and cotton crops. The agricultural sector generated an $18 billion trade surplus in 1993, helping to offset deficits in other areas.

After the U.S. share of world agricultural trade fell from a peak of almost 20 percent in 1981 to about 12 percent in 1986, the United States revised domestic support policies and increased export assistance. The tools used to boost farm exports include programs to help exporters compete in pricing, to help importers obtain credit needed to purchase U.S. commodities, to influence consumer tastes and preferences, and to provide U.S. farm products as food aid.

A number of program-specific issues are likely to have prominent positions in this year's debate in Congress over omnibus farm legislation. One such question is how best to implement the Export Enhancement Program (EEP), which was successful in bringing the European Union (EU) to negotiate reductions in export subsidies, now that such subsidies are capped. And with the recent increase in exports of high-value products (HVP's), policymakers will be studying the role of export programs in HVP markets.

Another issue is how credit guarantees will operate in an environment where a growing number of foreign private entities (rather than state monopolies) import goods. The effectiveness of market promotion and an appropriate government role in such assistance can be contentious. With lower surplus stocks in exporting countries and higher commodity prices, future food aid availabilities for needy countries are uncertain.

In the aftermath of the GATT Uruguay Round, a key question is how to change the means and targets of export assistance. How funds are spent depends on the time horizon in which benefits are to be realized. In the short run, price subsidies are the quickest way to bring about greater sales, especially in the face of continuing EU subsidies and other competitors' pricing practices. However, the GATT agreement limits the commodities eligible for export price subsidies and subsidy volumes and values. Similarly, credit guarantees may help importers with foreign exchange constraints.

Market promotion may be the best way to develop consumer tastes and preferences to benefit U.S. producers. Nonprice market promotion activities have been used for a wide variety of HVP's as well as bulk commodities. If food aid, the most costly short-term means to boost exports, is combined with other economic assistance and generates economic growth in recipient countries, then such aid may lead to greater long-term demand for U.S. commodities.

Flexibility in providing export assistance will be needed to help U.S. exporters make sales in increasingly liberalized import markets. The effects of export subsidies are influenced by market conditions; that is, their effectiveness is greater in slack markets and less when supplies are tight.

Further, credit guarantee programs alone cannot substitute for price subsidies because savings to the importer in interest costs under a credit guarantee program often are not sufficient to counter competitors' exports that are subsidized or monopoly-controlled.

Studies of market promotion effectiveness have shown significant increases in export revenues from promotion, but critics have voiced concerns about taxpayer dollars displacing funds for activities traditionally financed by the private sector.

The Farm Bill Backgrounders

The report on which this summary is based is one of a series of 12 "Background for 1995 Farm Legislation" publications by USDA's Economic Research Service.

Besides export programs, the topics covered by the reports are wheat, dairy, feed grains, oilseeds, cotton, rice, sugar, tobacco, honey, and marketing orders and promotion programs.
